

AMED Research Database

Analysis Report

Accepted Research Proposals (2015–2025)
Japan Agency for Medical Research and Development

Total Projects	3816
Researchers	3013
Institutions	741
Research Programs	214
Announcements	489

Data source: https://www.amed.go.jp/koubo/saitaku_index.html
Report generated: March 2026

1. Projects by Year

The number of accepted research proposals has grown significantly since 2020, peaking at 1,006 projects in 2024. The 2025 figure (560) reflects partial-year data. Early years (2015–2016) show lower counts as the database coverage begins. Notable gap in 2017–2019 data suggests different announcement formats during that period.

2. Young Researcher Programs

Young researcher programs account for 1,929 projects (50% of total). AMED actively supports early-career scientists through dedicated funding tracks across most research programs.

3. Top Institutions

The University of Tokyo leads with 243 projects, followed by Osaka University (182) and Kyoto University (174). National research centers (National Cancer Center, National Institute of Infectious Diseases) also feature prominently, reflecting AMED’s focus on translational and clinical research.

4. Top Research Programs

Infectious disease research leads with 397 projects, driven by COVID-19 era funding. Cancer research (innovative cancer medicine + next-generation) totals over 600 projects combined. Intractable diseases (252), advanced research support (AMED-CREST/PRIME, 222), and drug discovery (151) round out the top programs.

5. Research Topic Trends

Keyword analysis of project titles reveals shifting research priorities:

- Cancer (がん): Consistently the largest area, peaking at 106 projects in 2024.
- Infectious diseases (感染症): Surged in 2022 (58 projects) following COVID-19, now declining.
- Brain/Neuroscience (脳): Steady at ~30 projects/year, reflecting sustained investment.
- Drug Discovery (創薬): Growing trend from 18 (2021) to 41 (2024).
- Genomics (ゲノム): Stable at ~30/year with peak in 2022.
- AI: Rapid growth from 21 (2021) to 31 (2025), showing increasing integration of AI in medical research.

6. Top Institutions by Year (2021-2025)

Year-by-year breakdown of the top 5 institutions shows consistent dominance by major national universities and research centers, with some variation in relative rankings.

2021	Institution	Projects
1	東京大学	36
2	大阪大学	23
3	国立がん研究センター	21
4	京都大学	21
5	国立感染症研究所	19

2022	Institution	Projects
1	東京大学	53
2	大阪大学	41
3	国立がん研究センター	37
4	京都大学	35
5	国立感染症研究所	33

2023	Institution	Projects
1	東京大学	47
2	国立感染症研究所	38
3	京都大学	34
4	大阪大学	32
5	国立がん研究センター	28

2024	Institution	Projects
1	東京大学	67
2	京都大学	64
3	大阪大学	48
4	国立がん研究センター	39
5	名古屋大学	29

2025	Institution	Projects
1	東京大学	34
2	大阪大学	33
3	国立がん研究センター	32
4	国立健康危機管理研究機構	28
5	慶應義塾大学	20
